

September 16, 1960

### Chick Production

Commercial hatcheries produced 172,155,000 chicks in August, up 5 percent from August 1959. Output of broiler-type chicks totaled 156,009,000, compared with 149,932,000 in August last year--an increase of 4 percent. Eggs in incubators on September 1, 1960 indicate that hatch of broiler-type chicks will continue to be larger than a year earlier. Output of broiler-type chicks January through August totaled 1,379,505,000, compared with 1,329,142,000 during these months in 1959--an increase of 4 percent.

Production of egg-type chicks during August totaled 16,146,000, up 20 percent from the relatively light hatch of 13,404,000 in August 1959. A larger September hatch of egg-type chicks than a year ago is in prospect as the number of egg-type eggs in incubators on September 1 was 14 percent larger than on September 1, 1959. Production of egg-type chicks during the first 8 months of 1960 totaled 415,941,000, compared with 485,081,000 during this period in 1959--a decrease of 14 percent.

### Poult Production

Heavy white breed poult production during August of 1,288,000 pouls was 28 percent larger than in August 1959. The hatch of other heavy breeds (mostly bronze) of 398,000 was over four times as large as the seasonally light hatch of 86,000 in August 1959. For the year to date, January through August, the hatch of heavy white breeds of 19,216,000 was up 14 percent from the same period in 1959. The hatch of 53,767,000 other breed pouls, January through August 1960, was up 5 percent from this period in 1959. Output of light breed pouls in August totaled 1,124,000--up 5 percent from August 1959. The cumulative hatch of light breed pouls, January through August 1960, was down 35 percent from a year earlier.

Total hatch of pouls of all breeds during the first 8 months of 1960 was approximately the same as hatched during the first 8 months of 1959.

Turkey eggs in incubators September 1 indicate that the hatch of turkey pouls in September will be larger than in September 1959. For the first time during 1960, the number of light breed eggs in incubators was above that of a year earlier.
